PDGFRα Mouse Monoclonal Antibody(5D1) Catalog No.: RA10172

Basic Information

Information	
Reactivity	H,M,R
Immunogen	Synthetic Peptide
Host	Mouse
Isotype	IgG1
Storage Buffer & Condition	1mg/ml in PBS, pH 7.4, containing 0.02% sodium azide and 50% glycerol.
Observed MW	180KD
Applications	Recommended Dilution
Applications IHC	Recommended Dilution 1:100-200
ІНС	

Reed Biotech Ltd

Experimental Data

Immunohistochemical analysis PDGFR a Mouse mAb diluted at 1:200.

of Immunohistochemical of analysis paraffin-embedded Rat Skin Tissue using paraffin-embedded Human Skin Tissue using PDGFR a Mouse mAb diluted at 1:200

Background

Platelet derived growth factor (PDGF) family proteins exist as several disulphide-bonded, dimeric isoforms (PDGF AA, PDGF AB, PDGF BB, PDGF CC, and PDGF DD) that bind in a specific pattern to two closely related receptor tyrosine kinases, PDGF receptor α (PDGFR α) and PDGF receptor β (PDGFR β). PDGFR α and PDGFRβ can each form heterodimers with EGFR, which is also activated by PDGF. Various cells differ in the total number of receptors present and in the receptor subunit composition, which may account for responsive differences among cell types to PDGF binding. Ligand binding induces receptor dimerization and autophosphorylation, followed by binding and activation of cytoplasmic SH2 domain-containing signal transduction molecules, such as GRB2, Src, GAP, PI3 kinase, PLCy, and NCK. A number of different signaling pathways are initiated by activated PDGF receptors and lead to control of cell growth, actin reorganization, migration, and differentiation.
