Experimental Data

Western blot analysis of 1)Hela, 2)Jurkat,3)HepG2, 4)Mouse Liver tissue, 5)Rat Brain tissue, with GR Rabbit pAb diluted at 1:2,000.

Background

The glucocorticoid receptor (GR or GCR). The GR is expressed in almost every cell in the body and regulates genes controlling the development, metabolism, and immune response. Because the receptor gene is expressed in several forms, it has many different (pleiotropic) effects in different parts of the body.
